

EECP POWER DASH

HOW IT WORKS

Simplify all your EE program management products in one easy step. We know you've got a system, and if it's not broken, it doesn't make sense to replace everything you're using. But we also know that when it comes to reporting, working with multiple products can be frustrating and cause a lot of manual report creation that takes your team away from other tasks and runs the risk of user error. With that in mind, ESG has created a solution: a simple dashboard that aggregates and automates all your energy efficiency program analytics.

The Power Dash is custom-tailored to exactly what you need it for, nothing more (and certainly nothing less). Basically, it collects data from all your reporting sources into a single database and turns it all into a consistent format. Then you can generate reports from the highest level down to the most granular detail, incorporating any or all of your data sources.

WHY YOU NEED IT

Don't overpay for extraneous features - make your work quick, straightforward, and to the point. Get your data the way you want it to look, and see the insights you want to see: all in one place, without extra bulk or extra staff hours. What we're saying is: with the Power Dash, you won't notice the addition of yet another EE program management tool - you'll notice using 2-5 fewer tools. Give us a call and find out how the EECP Power Dash can help you simplify everything.

Customer Focused

Your EE tools focus on your users' data. The Power Dash focuses on you. We've developed specific features to make using this tool as intuitive as possible.

Centralized Information

No more fiddling with spreadsheets or clicking through dozens of tabs. The Power Dash brings everything you need right to your screen.

Simplified Interface

It's easy on the eyes... and on the brain. Tailored to your needs, this tool forgoes bells and whistles to help you get quickly to what really matters.

Customized Reports

Since all your data is in one place, you can create reports you've never been able to run automatically. And that means you can plan more, better programs.
